RESEARCH SUMMARY

My research group Aich Laboratory for Environmental Nanotechnology and Sustainability (#AichLENS) focuses on the *safer and intelligent design of advanced (nano)materials for water quality engineering and resource recovery as well as determining environmental and global health implications of these novel materials and other emerging contaminants*. Topics of interest include:

- (i) Safer-by-design multifunctional nanohybrids for catalytic degradation of emerging contaminants.
- (ii) Additive manufacturing or 3D printing for nano-enabled water treatment.
- (iii) Novel design of 2D nanomaterial-based high-performance water purification membranes.
- (iv) Data driven (nano)material discovery for environmental remediation and separations.
- (v) Environmental and global health implications of electronic waste and plastic wastes.

My research is extramurally supported by total >\$2M grants from the National Institute of Health Superfund Research Program (NIH SRP) R01 and United States Department of Agriculture (USDA) as well as supports from US Environmental Protection Agency (USEPA), New York State Department of Environmental Conservation (NYSDEC), and Swedish International Development Cooperative Agency (Sida). My research also resulted in 55 publications (40 peer-reviewed journal articles, 7 book chapters, 6 conference papers, and 2 patents) among which 35 publications and 28 journal articles were produced after joining UB.
